

SWEDEN: A MOCK DEMOCRACY?

This report consolidates the two previous investigations into Swedens political structure and civil liberties and compares its democratic integrity with other nations. Sweden presents itself as a liberal democracy, but systemic behavior across political lines, mass surveillance, and unequal rule of law tell a different story.

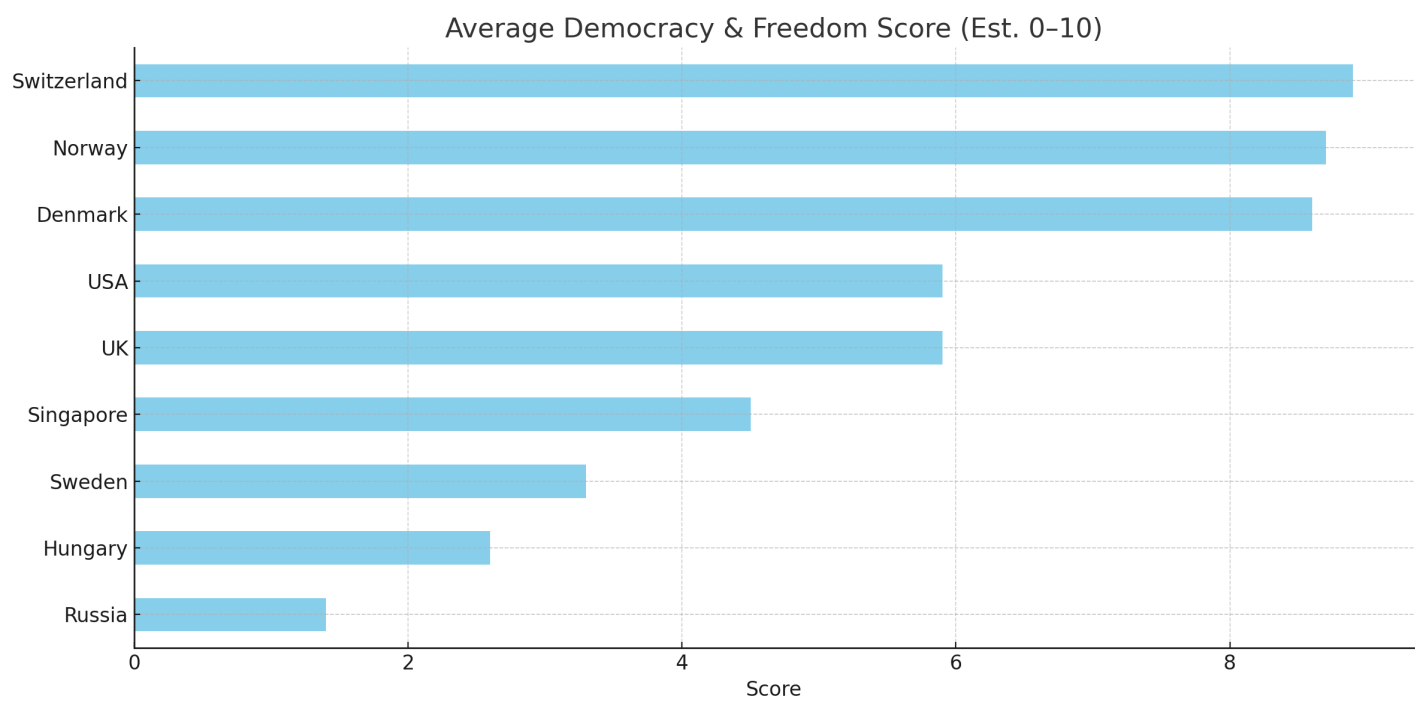

By evaluating Sweden across 10 democratic dimensions and comparing it with 8 peer and non-peer nations, we arrive at a striking conclusion: Sweden operates more as a managed, elite-dominated hierarchy than a participatory democracy.

SCORING MODEL (010):

Higher = More democratic, transparent, rights-based governance.

Lower = More centralized, opaque, and selectively repressive governance.
